Hi,

My name is Jonatan Seger and I'm 25 years old. I'm born and raised in Stockholm, Enskede to be explicit. When I started school in *Tallkrogens Skola* I used to do a lot of sports and building treehouses on my spare time. I went on to high school in *Enskede Skola* where I put even more time into sports. But when upper secondary school came, I only played hockey and I have kept on playing until this very day. I studied the scientific program at *Kärrtorps Gymnasium* as well as having a part time job at *Länna Sport*. When finished there I went on to study 5 years at KTH and I have played hockey on national level.

During my time at the Media Technology track at KTH I soon got the chance to learn how to create websites and what is of importance when building an interface. I have familiarized with MVC and its programming languages as well as React.js. The time has come for me to get out into the industry and continue to develop my skills. I've built a website with React to demonstrate my current knowledge. Apart from websites I have also become familiar with Java, Python, SQL, XML, HCI, Business, and a lot more. I aim at acquiring a junior position within front-end development to keep improving my skills and knowledge in React, CSS, HTML, och JavaScript/JSX.

Last Spring, I wrote my master's thesis at Tele2's UX department about product development with a usability perspective. How to quality control one's digital products was of major importance. During this opportunity I got to see agile development and how they function as well as some insight into CRM, BI, etc.

Apart from technical skills, my education has provided me with thinking patterns and how innovation is created and driven. An eye for detail and a critical perspective have made me thorough and to question pretty much everything I touch, which according to me has improved my perception of what is good/bad during development. I have, through all my experiences, fostered a sense of whom should do what part of the project, which eases teamwork. Often during group assignments, I have taken the leading role in the group, this may be because my structured and analytical way of working and communicating with my peers.

Thank you for considering me!
